

cfbreak

Description

Used to break out of the cfloop, cfwhile or cfforeach loops. Code execution picks up after after the closing loop tag. The break affects only the innermost loop.

Example Usage

Example 1:

```
Looping from 1 to 10:  from="1" to="10" index="i">  #i#  i GT 4>  Break!  
/>
```

Was prevented from fully looping by the cfbreak tag.

Example 1:

- [Example Usage](#)

Looping from 1 to 10 with broken sub loop: from="1" to="10" index="i">

```
Sub Loop #i#:            randomBreak = randRange(1,10) />            from="1" to="10"  
index="i">            #i#            i GT randomBreak>            Break!            />
```

Inner loops were prevented from fully looping by the cfbreak tag **while** the outer loop continued normally.
