

cfcase

Description

Handle one case of a cfswith

Category

Other

Implemented

Usage Syntax

```
value="String"  
[delimiters="String"]  
/>
```

[] = Optional attribute

Attributes

Name	Type	Required	Default	Description
value	String	Yes		One or more constant values that cfswith compares to the specified expression case-insensitive comparison. If a value matches the expression, cfswith executes the code between the cfcase start and end tags. Separate multiple values with a comma or other delimiter, as specified in the delimiters parameter. Duplicate value attributes are not allowed and causes a runtime error.
delimiters	String	No		Specifies the character that separates multiple entries in a list of values.
