| Name | Type | Required | Default | Description |
|-------------|-------------|-----------------|----------------|---|
| header | String | Yes | | The text for the column's header. |
| width | number | No | | The width of the column in characters (the default is 20). If the length of the data displayed exceeds the width value, the data is truncated to fit. |
| align | String | No | | Column alignment, Left, Right, or Center. |
| text | String | No | | Double-quote delimited text that determines what displays in the column. The rules for the text attribute are identical to the rules for cfoutput sections; it can consist of a combination of literal text, HTML tags, and query record set field references. You can embed hyperlinks, image references, and input controls in columns. |

Example Usage
