

cferror

Description

Enables the display of customized HTML pages when errors occur. This lets you maintain a consistent look and feel within your application, even when errors occur.

Category

Other

Implemented

Usage Syntax

```
type="String"  
Template="String"  
[mailto="String"]  
[exception="String"]  
/>
```

[] = *Optional attribute*

Attributes

Name	Type	Required	Default	Description
type	String	Yes		The type of error that the custom error page handles.
Template	String	Yes		The relative path to the custom error page.
mailto	String	No		The e-mail address of the administrator to notify of the error. The value is available to your custom error page in the MailTo property of the error object.
exception	String	No		Type of exception. Required if type = "exception" or "monitor".
