

# cflocation

## Description

Opens a ColdFusion page or HTML file. For example, you might use cflocation to specify a standard message or response that you use in several ColdFusion applications. Use the addToken attribute to verify client requests.

## Category

Other

## Implemented

## Usage Syntax

```
url="String"  
[statusCode="number"]  
[addToken="Boolean"]  
</>
```

[] = *Optional attribute*

## Attributes

Name	Type	Required	Default	Description
url	String	Yes		The URL of the HTML file or CFML page to open.
statusCode	number	No		statusCode used for the redirect (301 or 302)
addToken	Boolean	No		Yes or No. clientManagement must be enabled, see cfapplication. Yes appends client variable information to the URL you specify in the url.
