

arrayInsertAt

Description

Inserts a value at the specified position in the array.
If the element is inserted before the end of the array, Railo shifts the positions of all elements with a higher index to make room.

Usage Syntax

```
arrayInsertAt(array array, number position, any value): boolean
```

Return Information

Return Type

boolean

Arguments

The arguments for this function are set. You can not use other arguments except the following ones.

Name	Type	Required	Description
array	array	Yes	The array which will have the new element inserted.
position	number	Yes	The numerical index in the array where the new element will be inserted. Must be less than or equal to the length of the array. Remember CFML arrays start at 1 not 0.
value	any	Yes	value to insert
