[datasource="string"]  
[dbname="string"]  
[dbnames="string"]  
name="string"  
[password="string"]  
[pattern="string"]  
[procedure="string"]  
[table="string"]  
type="string"
```

```
[username="string"];
```

[] = Optional attribute

Description

Lets you retrieve information about a data source, including details about the database, tables, queries, procedures, foreign keys, indexes, and version information about the database, driver, and JDBC. This tag supports only JDBC drivers, and does not support ODBC-based drivers, including the Microsoft Access driver.

Body

This tag can't have a body.

Attributes

The attributes for this tag are fixed. Except for the following attributes no other attributes are allowed.

Name Type Required Description

datasource	string	No	Datasource to use to connect to the database.
dbname	string	No	Name of the database
dbnames	string	No	Name of the database (alias for dbname)
name	string	Yes	Name to use to refer to the result.
password	string	No	Password to connect to the database.
pattern	string	No	Specifies a filter to retrieve information about specific tables, columns, or stored procedures
